Unfortunately the sound was very bad, so I couldn't hear well and sometimes I couldn't hear at all. In the second part the sound was ok, but just concerning the presenter. I couldn't hear the questions posed by the participants so it was difficult to follow the answers given.

we can listen answers but we can't link them to the questions, (the only microphone available was the one on the instructor..). if possible, the instructor would repeat the question before answer .

The workshop was interesting, however it was very difficult to follow the presentation due to videoconference transmission problems (specially the sound quality). Additionally I would prefer to see the presenter together with the slides, as in a traditional workshop, instead of only the slides.

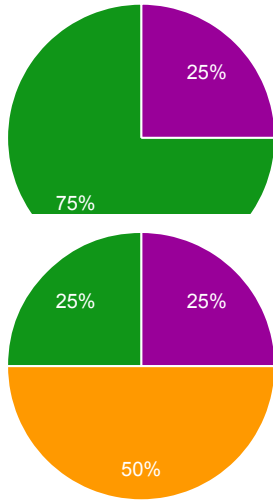

The workshop was excellent. Since I participated in a remote way, it would be interesting to add another webcam so remote participants may get a general panorama of the room and to see the instructor (presenter). In other words, a frame with the slides and another frame with the image of the presentation would be very interesting.
